

Gemline

Benefits of Gemline Soft Water

- Protects your entire plumbing system throughout your home
- Dishes, silverware & china will sparkle and you'll have a cleaner coffee maker without scale or build-up
- Saves you work, time, and money when scrubbing the kitchen sink, cutting boards, counter tops, tubs, toilets, and shower doors
- Eliminates hardwater spots and reduces soap scum and residue buildup on showers, tubs, and sinks
- Treated water leaves your skin feeling smoother
- Hair will be softer and more manageable
- Reduces soap, shampoo, and bathroom cleaner usage by nearly 50%
- Increases water heater efficiency by almost 30% and extends your water heater's life by many years
- Improves water flow and pressure by eliminating calcium buildup in pipes
- Clothes and linens are cleaner, brighter, softer and last longer
- Adds life to dishwasher, washing machine & all water fixtures
- Cuts down on laundry detergent, fabric softeners and all cleaning supplies by 50%, saving you money
- Systems can regenerate with sodium or potassium

The Gemline Softening and Regeneration Process

Soft water works by hardwater entering the water softener system. As it passes throughout the resin bed inside the tank the hardwater minerals are attracted and attach to the resin beads, leaving only softened water to service the home.

When the resin becomes saturated with hardwater minerals, the water softener system automatically goes into regeneration. This is the process that frees the resin of hardwater minerals, making it ready to soften the water again. Brine water is drawn into the resin tank and rinses the hardwater minerals off the resin and down the drain. Once the resin is free of hardwater minerals, fresh water rinses the remaining brine water out of the system leaving the system refreshed and ready for service.
